

Academic Qualifications

Year	Degree/Certificate	Institute
2023 - 2027	B.Tech (AI and ML)	Ajay Kumar Garg Engineering College, Ghaziabad
2022	Class XII (CBSE)	Sigma School of Excellence, Jhalawar, Rajasthan
2020	Class X (CBSE)	Bhashyam Blooms, Guntur, Andhra Pradesh

Key Projects

- Scapia AI: Multi-Modal RAG Document Assistant
- RAG Application | Python, Streamlit, LangChain, Groq API (Llama 3.3), ChromaDB, HuggingFace
- Engineered a multi-modal RAG pipeline using **LangChain** to extract and index complex PDFs and YouTube transcripts
 - Integrated **ChromaDB** and **HuggingFace** embeddings for high-speed local vector storage and precise query matching
 - Powered the chat interface via **Groq API** and **Llama 3.3** for ultra-fast, context-grounded AI inference
 - Developed a persistent **Streamlit UI** with custom session-state architecture for multi-thread conversation management
- SalesMind: AI Sales Intelligence Platform
- AI Backend & SaaS Integration | Python, FastAPI, Groq API (LLaMA 3.3 70B), Next.js
- Built an **AI backend with FastAPI, Groq API, and LLaMA 3.3 70B** — integrated with a **Next.js** frontend
 - Engineered complex NLP workflows to parse raw meeting transcripts and auto-generate personalized email outreach
 - Developed a data pipeline for the CRM dashboard featuring **AI lead scoring** and pipeline risk analysis metrics
 - Accelerated deployment by utilizing AI tools to assist in building the React UI, focusing core efforts on ML logic
- HireSense.AI: Smart ATS Resume Optimizer
- AI-Powered Resume Analysis Platform | Python, Streamlit, Groq API, PyPDF, ReportLab
- Built an **AI-powered ATS resume analyzer** via Groq API and Llama-3 70B for real-time job description matching
 - Engineered a robust **PyPDF** backend pipeline for document parsing, keyword extraction, and semantic matching
 - Designed a hybrid scoring system (heuristic plus LLM) with zero-temperature prompting for deterministic JSON output
 - Programmed a dynamic PDF report generator using **ReportLab** and deployed via Streamlit Cloud with CI pipelines
- NextWatch: Movie Recommendation System
- Content-Based Filtering using Cosine Similarity | Python, Scikit-learn, Pandas, NumPy, Streamlit
- Developed a **content-based recommendation system** on **TMDB dataset** of **5,000+ movies** delivering personalized suggestions
 - Engineered a unified feature vector combining **genres, cast, crew, keywords, and overview** to improve recommendation relevance
 - Applied **CountVectorizer** and **cosine similarity** to compute pairwise scores achieving accurate **top-5 recommendations**
 - Built an interactive **Streamlit web app** with real-time **TMDB API** fetching, reducing average user search time by **80%**

Technical Skills

- Programming Languages:** Python, SQL
- Frameworks & Libraries:** LangChain, FastAPI, Scikit-learn, Pandas, NumPy
- AI & Tools:** ChromaDB, HuggingFace, RAG, LLMs, Groq API, Streamlit, Git, GitHub, Vercel

Certifications

- Foundations of Prompt Engineering | AWS Training & Certification
- Completed AWS-certified course covering **zero-shot, few-shot and chain-of-thought** prompting
 - Gained practical understanding of **LLM behavior, instruction tuning**, and designing **structured prompts** for deterministic and reliable outputs
 - Studied **prompt misuse, jailbreaking risks**, and best practices for building **safe, consistent, and production-ready** LLM pipelines
- Generative AI Fundamentals | Databricks Academy
- Completed Databricks Academy course covering **foundations of Generative AI** including **LLMs, diffusion models**, and transformer architectures
 - Studied real-world **GenAI applications** such as text generation, summarization, and **enterprise AI pipeline design**
 - Gained understanding of **fine-tuning strategies, model evaluation**, and responsible AI practices for production deployments

Positions of Responsibility

- Group Leader, NOVA-ML Project | Ajay Kumar Garg Engineering College, Ghaziabad
- Present
- Conceptualized and proposed** the multi-agent framework idea, driving the project vision and technical direction for the team
 - Leading and **coordinating a team of 4**, assigning responsibilities and ensuring smooth collaboration across all project phases
 - Conducted **in-depth research** on multi-agent systems and agentic AI principles to define the system architecture
 - Maintaining regular **sync-ups with the faculty guide** to align project progress with academic requirements and research objectives
